

Fume-A-Vent Type 7 Dual Temperature Combo Hose

Date 7/12

Part No. H-07-XXXX

Type 7 Combo Hose

TAB 1-G

The Fume-A-Vent Type 7 Hose is a Dual Temperature special hose that has a variety of options. Almost any of our hoses besides Crushproof can be combined to have two temperature ratings, the higher rated hose being closest to the heat source such as a vehicle exhaust. This benefit can be best seen where a long span of higher temperature hose would be too expensive, while the dual temperature can allow for the higher temperatures, and the air can cool slightly before meeting the lower temperature, cheaper section of hose.

The picture below features a 7A and 7C Dual Temperature hose, The chart gives the most common and stocked hose temperature options with both descriptions respectively. Please consult for special order hose combinations not listed. A variety of lengths and diameters available to choose from. Please consult our experts for assistance in choosing a hose.

Dual Temperature Hose Options

Temperatures °F	Description	Part No.
350 ⁰ / 570 ⁰	Neoprene-Coated Polyester Fabric/ Special Film Hose	H-07A
